Joe Chang was elected as the chairman of the 7th TWMA, hoping to strengthen the enterprise's constitution through talent cultivation and digital marketing

張志州當選第七屆TWMA理事長 盼能從人才培育與數位行銷強化企業體質

aiwan Woodworking Machinery Industry Association (TWMA) held an extraordinary general meeting on February 18 at the Fengyuan Li Yan Banquet Hall. During the meeting, the most important thing was to elect a new team of directors and supervisors. Joe Chang, the general manager of Kuang Yung Machinery, was successfully elected as the chairman of the board, James Lin , the general manager of Jun Shiau machinery and Ian Chang, the general manager of INNOVATOR Machinery both were elected as the vice-chairman of the board. In his speech, Joe said that Taiwan's woodworking machinery exports grew by 21.49% in 2020 and 28% in 2021 against the trend. These impressive achievements are the results of the

concerted efforts of Taiwan's woodworking machinery manufacturers. Looking forward to the future, Joe hopes to develop talents and digital marketing. Strengthen the corporate constitution, so that Taiwan's woodworking machinery industry can continue to lead and reach new heights.

Joe said that the new team members this vear include: Anderson, Chiu Ting, Arden, OAV, Kingcraft, etc. are companies with an annual turnover of over 100 million. Another feature is the addition of two female directors and supervisors, looking forward to the promotion of future conference affairs, which will be more helpful and push TWMA to another peak. Let the world see Taiwan woodworking machinery.

Industry type: Productivity and energy Product model number : STRATOS PRO FL Anderson Industrial Corp.

About STRATOS PRO FL

STRATOS PRO FL is equipped with 1. Automatic tool length measurement (reduce manual measurement errors, rare in competitors). 2. Tool change function while machining, the machining efficiency is increased by 10% to 20% (not yet competitors have this function). 3. The whole board is suspended and loaded, positioning once, and the feeding speed is twice as fast, without scratching the work piece (the competitor is a drag type, which is low in efficiency and easy to scratch the work piece). 4. The height of the unloading table is automatically adjusted to improve the stability of the automatic unloading. 5. Graphical and intuitive operation interface (AGMVP independently developed by Anderson).

- 1. Structure of the jumping spindle: it can cut the complex surface lines, could be furniture component or art accessories. Also this jumping spindle structure whiche control by the computer value (CNC, Computer Numerical Control), this can reduce the processing damage rate and increase working efficiency.
- 2. The operation interface using the HMI, it is easy to understand and operate through the graphical operate interface. All database including product, cutter tools, grinder data which gather in the HMI. The work product, order numbers, descriptive one by one shows out. Do not need to rely on the engineer memory to operate machinery. It is conveniences, speed, timeliness and variety small amount of rapid production; which may save time to get more order than others.

The above structure and function are closer to the needs of consumers, also increased the 4 side moulder its function; simplify the operation of the 4 side moulder, more in line with humanity needs.

TAITRA 2022 台北國際木工機械線上展 主題為 "在綠色製造中蓬勃發展

WOOD TAIWAN Digital Go 2022, Thrive in Green Manufacturing.

OOD TAIWAN, Taiwan's only trade show dedicated to the woodworking industry, has launched a brand-new online event "WOOD TAIWAN 2022 DigitalGo & Online Exhibition," a free-to-attend global event presented by TAITRA and TWMA, featuring WOODicover-factory tour, online exhibition, business matchmaking and Insights sharing. It will be live for 24 hours each day from April 28 to May 12 and accessible at any time during the event.

The theme for WOOD TAIWAN DigitalGo 2022 is "Thrive in Green Manufacturing." Focuses will be on making the best use of rare wood resources and improving the recycling and reuse of wood. Leading exhibitors include Leadermac Machinery, OAV Equipment and Tools, Kuang Yung Machinery, Innovator Machinery, Anderson Industrial, Jun Shiau (Sanderson) Machinery and Biesse Taiwan will be online showcase an array of products on energy-saving, consumption-reducing, waste-less, recyclable, and optimized production of plates processing machinery and components, in line with global sustainable manufacturing trends.

"WOOD TAIWAN 2022 DigitalGo & Online Exhibition" is also a comprehensive marketing initiative for woodworking industry suppliers worldwide. The show aims to serve the local and foreign companies interested in taking advantage of digital technology to enhance exposure and create opportunities online. Mark your calendar to participate with us. For more information, please visit the official website (www.woodtaiwan.com) and its social media community.

Insight of global woodworking machinery industry

洞察全球木工機械

全球木工機械整體產業狀況來看,中國出口排名躍升到世界第一,緊接著是德國、義大利及 臺灣。臺灣木工機械出口還有很大的成長空間,期許臺灣木工機械一同朝向智慧機械、數位 轉型邁進,製造更環保節能的機械,共同守護地球,邁向永續發展。

n terms of the overall industry situation of global woodworking machinery, China's export ranking has jumped to the first place in the world, followed by Germany, Italy and Taiwan. There is still a lot of growing space (a long way to go) in Taiwan's woodworking machinery exports. European manufacturers are still in a leading position in the market by virtue of their unique products and high-quality advantages. If Taiwan manufacturers want to improve their overall competitiveness, they must improve their overall technology. The main goal is to reduce the technological gap, follow the pace of technology to continue to develop and innovate, and develop machinery that is more in line with the trend of the times; actively introduce intelligent

elements to make woodworking machinery intelligent, and create a combination of traditional and future technology; through online exhibitions, online negotiation and other activities, continue to expand the use of digital marketing strategies, and also provide remote services through virtual reality (VR) and augmented reality (AR). We hope that Taiwan Woodworking Machinery will move towards intelligent machinery and digital transformation together, manufacture more environmentally friendly and energy-saving machinery, and jointly protect the earth, move towards sustainable development, and create prosperity together.
